Password Management

EXISTING ACCOUNTS:

Checking “Remember me”, “Stay signed in”
and not having a record can destroy you.

Computer Security Password Management

Setting up new accounts:

USER IDs ARE NOT PASSWORDS - Simple is better than cute

SECURITY COMES FROM PASSWORDS

- Use a different password on each account
- 8 characters or more
- Mix lower, upper case letters, numbers, permitted special characters
(* , & , % , # , ! , \$, & , etc., some sites will not accept some of these)
- Avoid names, dates, house numbers or email addresses, etc.
- Change password occasionally or if you suspect it has been compromised
- Mnemonics are helpful – Example: 1Small,2Medium,3Large

Computer Security Password Management

Recovering lost passwords:

OPTIONS – Set when you create account

Alternate email address, code sent as email – email must be accessible

SMS text message, code sent to cell phone – must have phone, reception

Security questions – answers that you can remember

Simple, unambiguous, explicit, unique – preferably one word

Computer Security Password Management

Keeping records of passwords:

MUST BE: Available, Current, Redundant

Handwritten lists

Tabular format files – password protected spreadsheet or Word tables

Password management software – Example: LastPass
